

## **Austin and Lisa's Project 2 Status Report**

Progress so far: For our group we worked during the weekend, we managed to finish the jupyter notebook and began to work on the SQL portion of the project.

To do: For the next two classes we will be looking in the SQL portion we have pending to finish as well as try to clean up our Repo since we ran into some problems importing all the documents into the correct location.

Blocker: A huge blocker we both had was importing the csv. Files into our repo and having them appear in the correct place for our Repo to look more organized and legible.
